Abstrak <i>Abstract</i>	<p>Malaysia's position near the equator makes its temperature so hot. Then special tools are indispensable for maintaining indoor temperature indefinitely at room temperature. Equipment available on the market is manual, which requires manpower for ON and OFF. Therefore, the 'Automatic Blower' project is specially designed to improve the existing system. We make the exhaust fan work automatically and it is better to maintain control of the room at room temperature. Our project uses Arduino UNO temperature sensor to work automatically. The problem we get on the exhaust fan is that it works manually, the previous user</p>								

	<p>should always ON / OFF his own exhaust fan. In addition, room temperature is proportional to the outdoor temperature. Our solution can be, the exhaust fan works automatically by adding a temperature sensor to adjust the room temperature to remain at a predetermined temperature. When the temperature is set at 32°C, the fan will ON automatically and when the temperature reaches 31°C the fan will automatically OFF. This makes it easy for users and user-friendly. In conclusion, our project is successful in achieving our goals and achieving objective by increasing the temperature sensor and Arduino UNO on the exhaust fan and function automatically to maintain the preset temperature.</p>
Keyword <i>Keyword</i> (max 5 word)	Automatic Blower
Objektif <i>Projek Project</i> <i>Objectives</i>	<ul style="list-style-type: none"> • Exhaust fan will work automatically respond to temperature. • The temperature can be set automatically to the room temperature, so that the temperature maintain.
Skop Projek <i>Project scope</i>	The scopes of the project we created a project using temperature sensor, and exhaust fan. So that, the exhaust fan will turn on/off automatically by using sensor temperature. The space around the room is 10 square meter and 150 square feet. The temperature sensor will on when the temperature over 32°C and it will cut off when the temperature below 31°C .
IP No	
Dapatan <i>Finding</i> (500 words max)	When the temperature is set at 32°C , the fan will ON automatically and when the temperature reaches 31°C the fan will automatically OFF. This makes it easy for users and user-friendly
Cadangan untuk kerja-kerja akan datang <i>Suggestion for future work</i> (500words)	High technology for disable people, we add solar system for saving the electric and use more sensitive to temperature detection.
Gambar berkaitan projek <i>Picture related to project</i> (700kb)	 <p>LM35 temperature sensor send the information to the ARDUINO</p> <p>ARDUINO send the information to the LCD</p> 

	 <p>LCD will give the info to the fan</p> 
Rating/Level	Jabatan/ Politeknik/ Kebangsaan/ Antarabangsa <i>Departments /Institutes /National /International</i>

* Borang ini perlu diisi oleh pelajar dan dihantar kepada penyelia/ penyelaras projek dalam bentuk hardcopy dan softcopy (borang LAMPIRAN J dan gambar hasil projek dalam format jpeg/bitmap) bersama laporan akhir dan hasil projek
