Abstrak <i>Abstract</i>	<p>In recent times the concept of smart cities have gained great popularity. Thanks to the evolution of Internet of things the idea of smart city now seems to be achievable. Consistent efforts are being made in the field of IoT in order to maximize the productivity and reliability of urban infrastructure. Problems such as, traffic congestion, limited car parking facilities and road safety are being addressed by IoT. In this paper, we present an IoT based cloud integrated smart parking system. The proposed Smart Parking system consists of an on-site deployment of an IoT module that is used to monitor and signalize the state of availability of each single parking space. A mobile application is also provided that allows an end user to check the availability of parking space and book a</p>

	<p>parking slot accordingly. The paper also describes a high-level view of the system architecture. Towards the end, the paper discusses the working of the system in form of a use case that proves the correctness of the proposed model</p>
Keyword <i>Keyword</i> (max 5 word)	Parking System
Objektif Projek <i>Project Objectives</i>	<ol style="list-style-type: none"> <li>1. To design an Intelligent Parking to improve the way of paying system.</li> <li>2. To implement for the people who always forget timeout of the parking...</li> <li>3. To develop an Intelligent Parking coupon using Arduino</li> </ol>
Skop Projek <i>Project scope</i>	<ol style="list-style-type: none"> <li>1. This Intelligent Car Parking only can be used in Majlis Bandaraya Melaka</li> <li>2. This Project can be used only with the Smart Reader Card</li> </ol>

IP No	
Dapatan <i>Finding</i> (500 words max)	Kami mendapatkan sumber projek kami daripada penyelia dan internet
Cadangan untuk kerja-kerja akan datang <i>Suggestion for future work (500words)</i>	kami bercadang agar projek kami boleh dibayar melaui sistem online iaitu kredit kad dan debit kad
Gambar berkaitan projek  <i>Picture related to project (700kb)</i>	 
Rating/Level	JABATAN
