Abstrak <i>Abstract</i>	<p>IoT based Health Monitoring System which records the patient heart beat rate and body temperature on the thingspeak application .Build beat temperature & heart rate beat monitoring devices use Pulse Rate and Thing Speak Apps that can save a patient's health information. Health monitoring is the major problem,due to lack of proper health monitoring ,patient suffer from serious health issue. Monitoring systems that are in use in today's world works in offline mode but it is of great need that a system must be designed so that patient can be monitored remotely in real time.This project can work by generating data on patient health monitoring through the provided Thing Speak Apps.</p>

Keyword <i>Keyword</i> (max 5 word)	BT & HRB MONITORING
Objektif Projek <i>Project Objectives</i>	<p>1)To build Thing Speak Apps that can save a patient's health information</p> <p>2)To build smart technology to check patient health using patient health monitoring system.</p> <p>3)To Build beat temperature & heart rate beat monitoring devices use Pulse Rate and Thing Speak Apps.</p>
Skop Projek <i>Project scope</i>	<p>1)Pulse rate sensor is a well-design plug-and-play heart-rate sensor for arduino</p> <p>2)Body temperature use LM35 temperature sensor ,the range is from -55°C to 150°C.</p> <p>3)Use Thing Speak Apps connect to ESP8266.</p>

IP No	
Dapatan <i>Finding</i> (500 words max)	We created this project based on a combination of the ideas we have derived from the problem statement
Cadangan untuk kerja-kerja akan datang <i>Suggestion for future work</i> (500words)	Updating the health system to facilitate regular monitoring of patients
Gambar berkaitan projek <i>Picture related to project</i> (700kb)	 
Rating/Level	JABATAN
