Abstrak <i>Abstract</i>	<p>Today's breeding is categorized as very good income if high-quality livestock products. This is because, if the animal is guarded from the aspect of healthy eating and not making it easy. About the idea that our project is more for oil palm farmers who use palm fronds and leaves as the main food for their livestock farmers. Next, the problem faced is regarding palm oil sticks that are sharp and difficult to melt even though they are already included in the chopper available. This results in animal breeding experiencing internal injury such as intestinal ulcers as a result of sticks eaten and those farmed animals experiencing shrinkage in size and quality causing losses to farmers.</p>

Keyword <i>Keyword</i> (max 5 word)	Mengasingkan daun dan lidi kelapa sawit
Objektif Projek <i>Project Objectives</i>	Creating two in-one products for separation of leaves for animal feed and skewers for the manufacture of skewers. Reduce labor for isolation. It can save on the cost of farming, but it is also profitable to produce skewers. Reducing the risk of animal intestinal health for healthy and quality growth. The source of leaves and palm fronds are not limited to nutritional income.
Skop Projek <i>Project scope</i>	We have interviewed an oil palm farmer who breeds cattle and goats, he found that he took time and wasted energy to isolate the skewers. This project is focused on breeders who have their own farms. The main controller is used mostly like a sugar cane machine.
